

## Standard I.V. Catheter, Without Injection Valve

- I.V. Catheter without injection valve having projection at main body for two point grip and easy insertion.
- Angled & grooved wings offer easy fixation and prevent pistonning & rolling of catheter over the patient's body.
- Used in more complicated cases to minimise risk of infection from extra opening.
- Disposable, Sterile and Non-Pyrogenic.

Catalogue No.	Gauge	Colour Code	OD (mm)	Length (mm)	Flow Rate (ml/min)	Packing Inner/Outer (unit)
