सीताफल की व्यवसायिक स्तर पर खेती

Introduction:

Custard apples yield to the touch when ripe. If ready for consumption, the white flesh inside will be slightly visible in between the fruit's bumpy protrusions. Unripe fruits have a dark, green skin and do not yield to the touch. Overripe fruits, on the other hand, fall apart in the hand and have a black exterior. They also lose their sweetness and have a bland, mildly musky flavor. Many farmers pick Annona fruits before they're fully ripe, as they continue to ripen once picked from the tree. Store with bananas in a brown paper bag to hasten ripening.

Usage:

Custard apples contain anti-oxidants like Vitamin C, which helps to fight free radicals in our body. It is also high in potassium and magnesium that protects our heart from cardiac disease. Not only that, it also controls our blood pressure. Custard apples contain Vitamin A, which keeps your skin and hair healthy.

Cultivation:

All annonas are tropical in origin and grow well in hot and dry climate with varying degrees of difference. Custard Apple requires hot dry climate during flowering and high humidity at fruit setting. Flowering comes during hot dry climate of May but fruit setting takes place on set of monsoon. Low humidity is harmful for pollination and fertilization. The Custard Apple with stands drought conditions cloudy weather.

Species:

Custard apples grow best in sandy loam soils, but well-structured clay loams are also suitable. Although the tree's main feeder roots are relatively shallow, at least 1 m of well-drained soil without heavy clay or rock is needed to avoid root rot and ensure good tree performance. Where the topsoil is less than 1 m deep, plant the trees on mounds.

Marketing:

Custard apples demand is immense therefore marketing it is not difficult. Custard apples are brought by many people in market. Our company also provides the facility of Buy Back agreement.

Harvesting:

Custard apple is usually harvested from February to early November with the peak time in May/June. For Pinks Mammoth, KJ Pinks, Maroochy Gold and Hillary White, fruit are ready to be picked as soon as there is creaming of the grooves between the fruit carpels. Custard apple production starts in second year. The weight of each custard apple is 600 grams.

Economics Of One Acre Custard Apple Cultivation:

Expenditure:

Distance (in acre)	Sapling (in land)	Cost (per plant)	Total	Other expenses (as per require- ment)	Cost of cultivation
10X10 ft	440	80 rs.	440X80 = 35,200/-	Fertilizers Land prepara- tion Labor expenses etc	35,200 /-
Total Cost Of Cultivation: 35,200/-					

Income:

Income of year	From each plant	Total	Company buy-back	Total
Year 2 nd	15 kg	440X15 = 6600 kg	12 rs. kg	6600 X12 = 79,200 /-
Year 3 rd	20 kg	440X20 = 8800 kg	12 rs. kg	8800X12 = 1,05,600 /-
Year 4 th	25 kg	440X25 =11000 kg	12 rs. kg	11000 X12 = 1,32,000 /-
Total Income: 3,16,800/-
