कालमेघ की व्यवसायिक स्तर पर खेती

Introduction:

Kalmegh is hardy plant and has been used as medicine since time immemorial. This plant is also known as 'Rice bitter' in West Indies and 'King of bitters' or 'Chiretta' in England. The fresh and dried leaves of Kalmegh are used as drugs in India. Branches are quadrangular and narrowly winged towards the apical region.

Variety: Andrographis Paniculata

Uses:

- ✓ Digestive: Promotes Digestion
- ✓ Hepatoprotective: Protects the liver and gall bladder.
- ✓ Vermicidal: Kills intestinal worms & support intestine.
- ✓ Anti-acne: Protect skin from pimples.
- ✓ Anti-inflammatory: Reduces swelling and cuts down exudation from capillaries.
- ✓ Expectorant: Promotes mucus discharge from the respiratory system.
- ✓ Hypoglycemic: Blood sugar reducer. Immune Enhancement.
- ✓ Laxative: Aids bowel elimination.

AYURVED (NFC) PVT. LTD.

Cultivation:

It can be cultivated on wide range of soils from loam to lateritic soils with moderate fertility. It can be cultivated on shady wastelands also. The climatic requirement of the plant is hot and humid conditions with ample sunshine. With the onset of monsoon, plant grows luxuriantly and starts flowering with the moderation in temperature during September. Flowering and fruiting continues up to December until temperature drops drastically in Northern plains.

Species:

Kalmegh is a bitter annual (perennial, if maintained) herb, erect, 50 cm to 1m. In Height, stem quadrangular, much branched; leaves opposite, short petioled; flowers in racemes.

Marketing:

Globe demand for Kalmegh is necessitating the cultivation. As illustrated, Kalmegh is a precious medicinal plant with expanding demand in domestic & international market. Forset was the only source, which is fast depleting since over exploitation. Hence its cultivation is must.

Harvesting:

Maximum herb biomass can be obtained in 90-100 days beyond which leaves start shedding. If crop is raised as annual crop and planted during the month of May/June, it should be harvested by the end of the September when flowering is initiated. At the time of flower initiation, active principle andrographolide is high in leaves. Since the whole plant contains active principles, entire harvested material is dried in shade and powdered.

Economics Of One Acre Kalmegh Cultivation:

Expenditure:

Distance (in acre)	Kit (1 kg) (in land)	Cost of Kit (per Kit)	Total	Fertilizer	Cost of cultivation
6inchX2 ft	2 kit	3500 Rs	3500X2= 7,000 /-	2,000 /-	7,000+2,000 = 9,000/-

Total Expenses: 9,000/-

Income:

1) Income From Seeds:

Income of year	Seeds (in 6 months)	Company buy-back (per kg)	Total
In 6 th month	1000 kg	60 Rs	1000X60= 60,000/-
Total Income From Seeds: 60,000/-			

2) Income From Whole Plant:

Income of year	Seeds (in 6 months)	Company buy-back (per kg)	Total
In 6 th month	600 kg	25 Rs	600X25= 15,000/-
