

2. Relieving fatigue and balancing body's pH value

Many people's fluid pH value is acid because of unhealthy diet, inadequate exercise and bad habits, which will generate a large amount of malignant free radicals, making people sub-healthy. Hydrogen can remove malignant free radicals, regulate body fluid pH, and balance the body's pH value, thus alleviating fatigue.

3. Helping weight-loss and improving blood circulation

Since body's metabolism often occurs in water, drinking water constantly facilitates intestinal peristalsis, prevent dry stool, and promote body's detoxification as well as increase satiety, reducing the intake of excess calories. In addition, Hydrogen is able to remove the peroxide radicals in blood, reduce blood viscosity and improve blood circulation.

4. Preventing alcoholism and protecting liver

After drinking alcohol, the liver's alcohol metabolism will induce malignant free radicals, damaging lots of organs, such as liver and kidney. Hydrogen can remove the free radicals effectively, and reduce the ethanol, peroxides and other harmful substances produced during the alcohol decomposition that will be excreted out of the body in the form of water and acetic acid so as to reduce the oxidative damage to liver tissues and achieve the purpose of protecting liver.

5. Eliminating inflammation and improving immunity

Poor lifestyle, bad eating habits, exercise habits and mental state will increase the harmful free radicals, which will attack human cells and cause a chain reaction, weakening immunity, and causing a variety of chronic diseases. Hydrogen, as an antioxidant, is not only a good "body cleanser" to resist free radicals, and alleviate the discomfort caused by inflammation, but also an important element to boost immunity.

Product Introduction

TIENS Source of Health Hyper-H Health CUP, equipped with a micro-computer control chip, can supply electrical energy for the both ends of electrolytic strip, which will generate hydrogen-rich water. Since "hydrogen" is translated as "Hyper-H" in Japanese, "hydrogen water" is also named "Hyper-H water".

Product Features

- Ti-coated Pt. Electrolytic Net: electrolytic hydrogen content is up to over 800ppb in 10 minutes.
- Food-grade PC Material, safe to use.
- Safe circuit with water-proof level 7 inside and level 5 outside.
- Safe air pressure valve can exhaust gas automatically when the snuffle valve pressure is up to 1.5N.

Safety

Convenience

- Small, light and portable.
- Durable polymer Li-ion battery; convenient USB charging line.

Fashion

- The color of the RGB light inside the CUP can change from time to time in the process of electrolysis, which looks amazing.

Smart

- Smart chip controlling: automatically detect if the volume and quality of water fit to reducing water.

Product Awards and Certifications

EU Safety Certifications: CE EU Safety Certifications: RoHS

Member of Japan Hydrogen Revitalization Association Hydrogen Content Certification of Japan Hydrogen Revitalization Association

About Free Radicals

Solar radiation, air pollution, smoking and pesticides can make human body produce excess free radicals, resulting in a stable vicious circle through capturing electrons constantly, which is the cause of body aging.

Hydrogen — A Safe Antioxidant

1. Excellent permeability

Hydrogen molecular is small, only 1/100,000-1/160,000 as big as the average cell. It is electrically neutral with strong diffusion, which can easily go through biological membrane, and then permeate the whole body rapidly, entering into all cells including three major barriers and blocked blood vessels of human body, and thus playing its antioxidant capacity.

2. Safety and Reliability

Taking water as its carrier, Hydrogen can circulate in the whole body via blood, which will react with oxygen free radicals to form water and then excrete out of the body along with urine, removing most of the toxins safely.

3. Strong Antioxidant Capacity

Hydrogen oxidation reduction potential is up to -300-500mV. Taking "0" as the median, the larger the negative value is, the stronger the antioxidant capacity is. Besides, the antioxidant capacity of Hydrogen is better than that of other antioxidants, such as Vitamin A, C and E as well as green tea.

Efficacy of Hydrogen

1. Beauty care and resisting skin aging

Active oxygen is thought to be the reason for dark spots, wrinkles and aging. The combination between hydrogen with active oxygen generates water, which can lighten spots, improve skin tone, fight aging, and moisturize skin's cell, making the drinker glossier and more beautiful.
