

# VENUS EQUIPMENT

Complete Solutions for the Civil & Road Construction  
Machineries and Heavy Steel Fabrication

## Reversible concrete mixer Diesel engine operated

A new innovation from Venus industries made for the site where electrical supply is not available so we had combined the diesel engine with unique reversible drum mixer so one has to carry only one unit instead of separate DG and machine. We have proven our state of the art work and design and this machines are widely used across India. This machine has all the unique features like separate weighing of material, auto water dozing system, tow bar facility and micro processor based control panel.

Due to continuous up gradation in our technology Venus Equipment reserves it's all right to change or alter the design of the machine without any prior notice. For any further clarification regarding products please feel free to call us @ +91 85111 89405, +91 85111 89406.

## Technical details

Model	RM 800 DI	RM 1050 DI
Output capacity/ Hour	10 – 12 CuM	12- 15 CuM
Mixer type	Reversible drum type mixer	
Mixing and discharge of concrete	Forward rotation of the drum mix the material and reverse rotation of the drum discharge the concrete	
Main drive of the mixer	16 HP Air cooled Diesel engine	20 HP air cooled diesel engine
Material weighing system	Digital load cell based weighing of material	
Water tank capacity	200 litre	250 litre
Water feeding system	Auto water dozing system	
Pneumatic tyres	4 no	4 no
Hydraulic tank capacity	200 litre	250 litre
Centralized lubrication system	Inbuilt centralized lubrication system	
Tow bar facility	Yes	yes
Control panel	micro processor based control panel	
Hydraulic oil cooler	Yes	Yes
12V DC battery	80 AMP	80 AMP
